	NV	ELD	Hatchery	Full Suppression	3 m SE Baker, NV	1,168	0	100%	7/6/17	Type 4 IC Anderson	0	1	0	0	0	Maintain resources on scene	Sage Grouse habitat, minimal threat to Baker, NV.
*** Notes of Significance *** Fires highlighted in yellow have submitted a final ICS-209																	

## Evening Brief

Date Stamp: Thursday July 6, 2017

---

### Weather Summary

#### ...HIGH RISK for Scattered Monsoonal Thunderstorms Thur-Sat...

Hot temperatures will continue through the weekend across the Great Basin under strong high pressure with most valleys approaching or exceeding 100 degrees.

The first push of monsoon moisture moved north into the Western Great Basin yesterday and is expected to increase in areal coverage today through the weekend and into next week. Storms will be a mix of wet and dry and be faster moving on the western side of the ridge across Nevada the next few days. Deeper moisture will work its way north later this weekend into next week with better chances of more widespread wetter storms.

We have issued **High Risk** for today thru Saturday from west to east...but held off extending the high risk into Sunday and next week, due to the uncertainty of how much fuels may moisten from increased thunderstorm activity. Timing and locations may change through the period. Stay tuned for further updates.

### Preparedness Levels

#### Current:

Great Basin	3
National	3

---

### Great Basin Fire Potential Summary

Fine fuels, which have been the main contributor to fire spread early this season in the north and west, continue to dry out quickly across the Great Basin. Higher than normal fine fuel loading and continuity exists over the northern half of the Great Basin. ERCs have now climbed to the 90th-97th percentile over southern and eastern NV/UT and the AZ Strip and are **near record highs in some areas**, with more advanced fire behavior on ongoing fires in southern Utah.

Further north ERCs also continue to increase and dry out...mostly in the 60th to 70th percentile with a few drier pockets. Sagebrush live fuel moisture is still near normal across the northern and western portions of the Great Basin, but is on the downward trend. Sagebrush live fuel moisture across Central/Southern NV/UT has dropped significantly to below normal and in some areas is approaching record lows.

---

### Resources:

- Crews: 10 T1 IHCs in GB, 10 committed.
- T1 IMT Team 2 - Martin committed to Brianhead fire.
- T2 IMT Team 6 - Chadwick committed to Earthstone fire.
- T2 IMT Team 7 - DeMasters committed to Brianhead fire.
- T2 IMT Team 3 - Rohrer committed to Great Basin Prepo. being staged in Elko, NV.
- T3 IMT Thaler committed to Dry Gulch fire.
- T3 IMT Hecht committed to Limerick fire.

Great Basin  
Coordination Center

- Local IA resources are at drawdown for UT and NV.
- GBCC has committed an estimated 70+ type 3, 4, 6 engines.
- 1-T1 and 0-T2 helicopters are available in GACC.

### Great Basin Fire Activity (from Irwin): Moderate Activity

**New Fires and Acres: 32 fires for 233.85 acres. 49,345 acres large fire growth.**

### Current Incident Details Todays Activity (from WFDSS):
